

You want to be careful if there is an ANGULAR change of the TL inside the Box and that angular change results in a COLOR change of the TL.

- Three conditions need to be met:
 - Angular change of the TL
 - TL inside the Box
 - TL color change

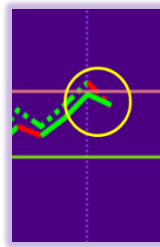

Be careful of this look!

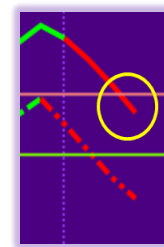

These three situations are OK:

Not Inside the Box

No Color change

No Angular change
No Color change

The closer to the center of the box the angular change of the TL that results in a color change, the more indeterminate which side of the Box it will come out.
